

ARRAYS

ARRAYS

IN JAVASCRIPT ARE SIMPLE
AND EASY-TO-USE.

ARRAYS IN JAVASCRIPT ARE SIMPLE AND EASY-TO-USE.

BTW, IF YOU HAVE NOT ENCOUNTERED ARRAYS
BEFORE - **AN ARRAY IS SIMPLY A LIST OF
VALUES**

AN ARRAY IS A **VARIABLE THAT CONTAINS MULTIPLE
VALUES** THAT CAN BE EASILY WORKED WITH

EXAMPLE 9: CREATING AND USING AN ARRAY VARIABLE

EXAMPLE 9: CREATING AND USING AN ARRAY VARIABLE

ITS ACTUALLY REALLY INTUITIVE AND SIMPLE TO DO

<script>

```
function arrayStuff() {  
    var allDays = ['Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun']  
    printArray(allDays, All days );  
}
```

```
function printArray(array, name) {  
    console.log("printing array:" + name);  
    console.log(array.length + " elements");  
    for(var i=0; i<array.length; i++) {  
        console.log(i + " : " + array[i]);  
    }  
}
```

```
window.onload = arrayStuff;
```

AN ARRAY IS SIMPLY A VARIABLE CONTAINING A LIST OF VALUES

```
<script>
function arrayStuff() {
    var allDays =
[ 'Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun' ];

    printArray(allDays, "All days");

    function printArray(array, name) {
        console.log("printing array:" + name);
        console.log(array.length + " elements");
        for (var i = 0; i < array.length; i++) {
            console.log(i + " : " + array[i]);
        }
    }
}

window.onload = arrayStuff;
```

AN ARRAY IS SIMPLY **A VARIABLE**
CONTAINING A LIST OF VALUES

```
<script>
function arrayStuff() {
    var allDays =
    [ 'Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun' ];

    printArray(allDays, "All days");
}

function printArray(array, name) {
    console.log("printing array:" + name);
    console.log(array.length + " elements");
    for (var i=0; i<array.length; i++) {
        console.log(i + " : " + array[i]);
    }
}
```

```
window.onload = arrayStuff;
```

**REMEMBER TO DECLARE YOUR
VARIABLE, ELSE IT WILL BECOME GLOBAL!**

AN ARRAY IS SIMPLY A VARIABLE
CONTAINING **A LIST OF VALUES**

```
<script>
```

```
function arrayStuff() {
```

```
    var allDays =  
    [ 'Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun' ];
```

```
    printArray(allDays, "All days")  
}
```

```
function printArray(array, name) {
```

```
    console.log("printing array:" + name);  
    console.log(array.length + " elements");  
    for(var i=0; i<array.length; i++) {  
        console.log(i + " : " + array[i]);  
    }  
}
```

```
window.onload = arrayStuff;
```

**THE LIST OF VALUES IS ENCLOSED IN SQUARE
BRACKETS, AND SEPARATED BY COMMAS**

AN ARRAY IS SIMPLY A VARIABLE
CONTAINING **A LIST OF VALUES**

```
<script>
function arrayStuff() {
    var allDays =
    [ 'Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun' ];

    printArray(allDays, "All days")
}

function printArray(array, name) {
    console.log("printing array:" + name);
    console.log(array.length + " elements");
    for (var i=0; i<array.length; i++) {
        console.log(i + " : " + array[i]);
    }
}

window.onload = arrayStuff;
```

**THE LIST OF VALUES IS ENCLOSED IN SQUARE
BRACKETS, AND SEPARATED BY COMMAS**

AN ARRAY IS SIMPLY A VARIABLE
CONTAINING **A LIST OF VALUES**

```
<script>
function arrayStuff() {
    var allDays =
    [ 'Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun' ];

    printArray(allDays, "All days");
}

function printArray(array, name) {
    console.log("printing array:" + name);
    console.log(array.length + " elements");
    for (var i = 0; i < array.length; i++) {
        console.log(i + " : " + array[i]);
    }
}

window.onload = arrayStuff;
```

**THE LIST OF VALUES IS ENCLOSED IN SQUARE
BRACKETS, AND SEPARATED BY COMMAS**

AN ARRAY IS SIMPLY A VARIABLE CONTAINING A LIST OF VALUES

<script>

```
function arrayStuff() {  
    var allDays = ['Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun']  
    printArray(allDays, "All days");  
}
```

```
function printArray(array, name) {  
    console.log("printing array:" + name);  
    console.log(array.length + " elements");  
    for(var i=0; i<array.length; i++) {  
        console.log(i + " : " + array[i]);  
    }  
}
```

```
window.onload = arrayStuff;
```

AN ARRAY IS SIMPLY A VARIABLE CONTAINING A LIST OF VALUES

```
<script>  
function arrayStuff() {  
    var allDays = ['Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun']
```

```
    printArray(allDays, "All days");  
}
```

```
function printArray(array, name) {
```

UNLIKE IN SOME OTHER LANGUAGES (EG. C), YOU
CAN PASS AN ARRAY INTO A FUNCTION PRETTY
EASILY, NO GOTCHAS

```
    console.log("Printing array: " + name);  
    console.log(array.length + " elements");  
    for (var i = 0; i < array.length; i++) {  
        console.log(i + ": " + array[i]);  
    }  
}
```

```
window.onload = arrayStuff;
```

**AN ARRAY IS SIMPLY A VARIABLE
CONTAINING A LIST OF VALUES**

```
console.log(array.length + "  
elements");
```

**HOW MANY ELEMENTS IN THIS ARRAY? SIMPLY
USE THE `.length` 'PROPERTY', AS ITS CALLED**

HOW MANY ELEMENTS IN THIS ARRAY? SIMPLY
USE THE `.length` 'PROPERTY', AS ITS CALLED

elements"

WE WILL HAVE A LOT MORE TO SAY ON
PROPERTIES SOON - FOR NOW JUST
REMEMBER THIS BIT OF SYNTAX :-)

AN ARRAY IS SIMPLY A VARIABLE CONTAINING A LIST OF VALUES

```
for(var i=0;i<array.length;i++) {  
    console.log(i + " : " + array[i])  
}
```

}
window.onload = arrayStuff;
A VERY COMMON WAY TO USE ARRAYS IS TO
"ITERATE" OVER AN ARRAY, I.E. DO STUFF TO
EACH ELEMENT IN THE ARRAY

"ITERATE" OVER AN ARRAY

```
for(var i=0;i<array.length;i++) {  
    console.log(i + " : " + array[i])  
}
```

window.onload = arrayStuff;
TO ACCESS AN INDIVIDUAL ELEMENT OF
AN ARRAY, USE THE INDEXING OPERATOR

TO ACCESS AN INDIVIDUAL ELEMENT OF
AN ARRAY, USE THE INDEXING OPERATOR

```
for(var i=0;i<array.length;i++) {  
    console.log(i + " : " + array[i])  
}
```

REMEMBER THAT JAVASCRIPT ARRAYS ARE INDEXED
STARTING FROM 0 (LIKE IN MOST LANGUAGES)

"ITERATE" OVER AN ARRAY

```
for(var i=0;i<array.length;i++) {  
    console.log(i + " : " + array[i])  
}
```

TO ACCESS AN INDIVIDUAL ELEMENT OF
AN ARRAY, USE THE INDEXING OPERATOR

"ITERATE" OVER AN ARRAY

```
for(var i=0; i<array.length; i++) {  
    console.log(i + " : " + array[i])  
}
```

BTW, IN CASE YOU HAVE NOT SEEN THESE
BEFORE, THIS HERE IS A "FOR LOOP"

BTW, IN CASE YOU HAVE NOT SEEN THESE
BEFORE, THIS HERE IS A "FOR LOOP"

```
for(var i=0; i<array.length; i++) {  
    console.log(i + " : " + array[i])  
}  
}
```

ITS A WAY OF PERFORMING AN
OPERATION A BUNCH OF TIMES (IN A LOOP)

BTW, IN CASE YOU HAVE NOT SEEN THESE BEFORE, THIS HERE IS A "FOR LOOP"

```
for (var i=0; i<array.length; i++) {  
    console.log(i + " : " + array[i])  
}
```

THIS BIT OF WEIRD SYNTAX TELLS THE LOOP HOW MANY TIMES TO EXECUTE

BTW, IN CASE YOU HAVE NOT SEEN THESE
BEFORE, THIS HERE IS A "FOR LOOP"

```
for (var i=0; i<array.length; i++) {  
    console.log(i + " : " + array[i])  
}
```

AT START OF LOOP, SET A LOOP VARIABLE
(‘COUNTER’) TO AN INITIAL VALUE

BTW, IN CASE YOU HAVE NOT SEEN THESE
BEFORE, THIS HERE IS A "FOR LOOP"

```
for(var i=0;i<array.length;i++) {  
    console.log(i + " : " + array[i])  
}  
}
```

ON EACH ITERATION OF THE LOOP, DO
SOMETHING TO THE COUNTER (INCREMENT IT)

BTW, IN CASE YOU HAVE NOT SEEN THESE
BEFORE, THIS HERE IS A "FOR LOOP"

```
for(var i=0; i<array.length; i++) {  
    console.log(i + " : " + array[i])  
}
```

KEEP GOING AS LONG AS THIS LOOP
CONDITION IS TRUE. ELSE, STOP LOOPING

```
for(var i=0;i<array.length;i++) {  
    console.log(i + " : " + array[i]);  
}
```

```
}
```

```
window.onload = arrayStuff;
```

```
printing array:All days
```

```
7 elements
```

```
0 : Mon
```

```
1 : Tue
```

```
2 : Wed
```

```
3 : Thu
```

```
4 : Fri
```

```
5 : Sat
```

```
6 : Sun
```

```
var allDays = ['Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun'];
```
